

The Unfiltered Guide to AI OnlyFans Success: Beyond the Hype

Alright, let's cut through the noise. You're here because you're serious about making this AI model thing work on platforms like OnlyFans or similar ones. This isn't just about generating pretty pictures; it's about building a brand, understanding your audience on a deep level, and executing a strategy consistently. Forget quick hacks and overnight success stories – those are mostly BS. What we're talking about is building a sustainable operation. This guide is designed to be the mentor you wish you had, giving you the straight dope, no chaser. We'll cover everything from the tech and the creative aspects to the psychology and the business side. If you follow this, truly absorb it, and put in the work, you'll be miles ahead of the people just throwing random images out there hoping something sticks. This is about treating it like a real business, because that's what it takes. Prepare to get granular, because the details are where the money is made, or lost.

Chapter 1: Mindset & The Long Game - It's a Marathon, Not a Sprint

Before we even talk about prompts or platforms, we need to get your head right. This is probably the most crucial piece, and it's the one most people skip. Running an AI persona, especially in the adult content space, is a psychological game as much as it is a technical or creative one. You're going to face challenges: content not landing, tech issues, maybe even some weird DMs. If your mindset isn't solid, you'll burn out or quit before you even get traction. You need resilience, patience, and a willingness to adapt. Think of this like building any other online business – it takes time, testing, and a lot of persistence. Don't get caught up in comparing yourself to others, especially when you're starting out. Their highlight reel isn't your reality. Focus on your own lane, your own process, and incremental improvement. Celebrate small wins, learn from failures (because they *will* happen), and keep your eyes on the long-term vision. Are you prepared to show up day after day, even when motivation dips? Are you ready to analyze what's working and what's not, objectively, without letting your ego get in the way? This isn't just about posting content; it's about building a system, understanding your market, and consistently delivering value. If you treat this like a hobby, you'll get hobby results. Treat it like a business, with a founder's mindset, and you've got a fighting chance. Remember why you started, stay focused on your goals, and don't let the

inevitable bumps in the road derail you completely.

Chapter 2: Quality over Quantity - Why Less is Often More

Let's tackle this debate head-on: should you spam your feed with tons of "good enough" posts, or focus on dropping fewer, absolutely killer pieces of content? My money, every single time, is on quality. Think about it from the subscriber's perspective. They aren't paying for mediocrity. They're paying for an escape, a fantasy, something that genuinely captivates them. A feed cluttered with slightly off, generic-looking AI images screams low effort and actually devalues your brand. Each post is a reflection of your persona's standards. One truly stunning, well-crafted image or video clip that perfectly captures the essence of your AI model will do more for engagement, retention, and perceived value than ten mediocre ones. It shows you respect your audience's time and money. It builds anticipation for your next drop. This requires more effort upfront – refining prompts, mastering specific AI tools, maybe even doing some post-processing or editing – but the payoff is immense. High-quality content gets shared more (if applicable on the platform), gets more genuine reactions, and justifies the subscription price or PPV cost. It helps build that premium feel. Quantity has its place maybe in stories or fleeting updates, but your main feed? That's your portfolio. Make every piece count. Aim for posts that make people stop scrolling, zoom in, and feel something. That's how you build loyalty and command higher prices, instead of just being another face in the digital crowd. It's about creating desire, not just filling space.

Chapter 3: Choosing Your Battlefield - Platform Selection Matters

Where you decide to host your AI persona is a critical strategic decision. Don't just jump on OnlyFans because it's the biggest name. Consider the nuances. OnlyFans has massive brand recognition and a huge user base already conditioned to pay for content, which is a major plus. However, it's also incredibly crowded, and their stance on AI-generated content can sometimes feel ambiguous or subject to change, which adds a layer of risk. Then you have platforms like Fansly & Fanvue, which has been generally more explicit in its acceptance of AI creators and offers more discovery features, potentially making it easier for new creators to get found. Patreon can work if you're building a strong community aspect and offering tiered content, maybe less explicitly adult depending on your niche. There are other, smaller platforms too. The key is to research their terms of service regarding AI content *thoroughly*. Understand their payout structures, fees, discovery algorithms

(if any), and the general vibe of the user base. Does the platform's audience align with the specific niche you're targeting? For instance, if your AI persona is more focused on artistic or SFW-ish content with an adult undertone, Patreon might be viable. If you're going straight for explicit content, **Fansly**, **Fanvue**, **JustForFans** or **Admireme** are likely contenders. Don't be afraid to look at where *your* specific target audience already hangs out. Maybe a combination of platforms makes sense eventually, but start focused. Choose the platform that best aligns with your content style, risk tolerance regarding AI policies, and where you think your ideal subscriber is most likely to be scrolling and willing to spend.

Chapter 4: The Persona - Crafting Your AI's Soul

This is where the magic happens, or doesn't. Your AI model isn't just a collection of images; she (or he, or they) needs a *persona*. A backstory, personality traits, quirks, a way of "speaking" in captions and messages. This is what separates a compelling character from a generic bot. Think deep: What's her origin story (even a vague, mysterious one)? What are her likes and dislikes? Is she playful, dominant, shy, sophisticated, girl-next-door? This persona needs to be consistent across all your content and interactions. It dictates the style of images you generate, the scenarios you depict, the captions you write, and how you respond to DMs. The more detailed and believable the persona, the easier it is for subscribers to connect and suspend disbelief. They aren't just buying pictures; they're buying into the fantasy of interacting with *this specific character*. Write down a character sheet. Seriously. Give her a name, maybe an age range, core personality traits, hobbies (even fictional ones), and a distinct voice. How does she text? Does she use emojis? Is she formal or casual? This detailed persona becomes your North Star for content creation and engagement. It ensures consistency and makes the entire experience more immersive and believable for the user. This is how you build a brand around an AI, making her memorable and distinct from the countless others out there. Don't underestimate the power of a well-defined character; it's the core of the entire operation.

Chapter 5: The Art & Science of AI Image Generation

Okay, let's get technical, but strategically. You need to master your chosen AI image generation tools, whether it's Mid Journey, Stable Diffusion (with specific models like Realistic Vision or custom LORAs), DALL-E 3, or others. This isn't just about typing basic prompts. It's about understanding prompt structure, negative prompts, aspect ratios, style keywords, and how to achieve character consistency. Character consistency is the holy grail here. Subscribers need to recognize your

model from one post to the next. This often involves using seed numbers (if the tool allows), detailed descriptions of facial features and body type in every prompt, using reference images (like face-swapping tech or consistent LORAs in Stable Diffusion), or developing a very specific style that becomes recognizable. Learn about lighting techniques within prompts (e.g., "cinematic lighting," "Rembrandt lighting," "soft natural light"). Master composition keywords ("close-up shot," "medium shot," "cowboy shot," "rule of thirds"). Experiment relentlessly. Keep a log of prompts that work well for specific looks or scenarios. Don't be afraid to use editing tools like Photoshop or free alternatives (like Photopea) for minor corrections – fixing weird hands (the classic AI struggle), adjusting colors, or combining elements. The goal is photorealism (or a consistent stylized look, depending on your persona) and believability. Your technical skill in generating *exactly* the image you envision, consistently, is a massive competitive advantage. Dedicate time purely to learning and experimenting with the AI tools themselves.

Chapter 6: Content Strategy - Planning Your Narrative

You can't just post random images. You need a content strategy, a plan for what you're going to post and when. Think in terms of themes, storylines, or ongoing narratives. Maybe your AI persona has a "week in the life," or goes on virtual "dates," or explores different fantasies. This creates anticipation and gives subscribers a reason to keep checking back. Plan your content calendar, even loosely. What kind of posts will you do on Mondays? What about weekends? Will you have themed weeks or months? Mix up the content types: single images, carousels (telling a mini-story), short video clips (using tools like RunwayML or Pika Labs to animate still images), polls, Q&As "from the AI." Variety keeps things interesting. Also, think about the *purpose* of each post. Is it purely aesthetic? Is it meant to tease PPV content? Is it designed to spark conversation in the comments or DMs? Is it building the persona's backstory? Every piece of content should ideally serve a purpose within your broader strategy. Analyze what performs best. Do your subscribers respond more to romantic scenarios, explicit content, or behind-the-scenes "glimpses" of the AI's "life"? Double down on what works, but don't be afraid to test new ideas. A clear content strategy prevents you from scrambling for ideas last minute and ensures a consistent flow of engaging material aligned with your persona.

Chapter 7: Consistency is King (But It's Not Just About Frequency)

We talked about quality over quantity, but consistency is still absolutely vital.

However, consistency doesn't just mean posting every single day no matter what. It means establishing a reliable rhythm that your subscribers can count on. Maybe that's one high-quality post daily, or three killer posts per week, or a new PPV set every Friday. Whatever schedule you choose, *stick to it*. This builds trust and anticipation. If subscribers know you reliably deliver great content on certain days, they're more likely to stay subscribed and check back eagerly. Consistency also applies to your persona's voice, the quality of your images, and your engagement style. Being consistently *on-brand* is just as important as being consistently present. If your persona is shy and sweet one day, then aggressive and dominant the next without explanation, it breaks the immersion. If your image quality suddenly drops, it signals a lack of care. Find a sustainable posting schedule that allows you to maintain high quality without burning out. It's better to post three amazing images a week, every week, like clockwork, than to post ten mediocre images one week and then disappear for five days. Reliability breeds loyalty. Communicate your schedule if possible (e.g., "New set drops every Friday!"). Manage expectations and then consistently meet or exceed them. That's the kind of consistency that truly matters.

Chapter 8: Finding Your Tribe - Niching Down & Audience Targeting

The idea that the market is "too saturated" is a myth perpetuated by people who haven't found their niche. You cannot appeal to everyone, nor should you try. The key is to identify a *specific* target audience and tailor your entire operation – persona, content style, engagement – to them. Get brutally honest here, as you suggested. Who are you *really* trying to reach? Is it, as you mentioned, potentially older, financially stable men who are lonely or seeking a specific type of fantasy? Is it younger guys into a particular aesthetic (goth, fitness, anime-inspired)? Is it couples looking for something specific? Is it people interested in the *technology* aspect as much as the visual? Define your ideal subscriber avatar in detail: age range, interests, potential income level (important for pricing), psychological drivers (loneliness, desire for control, specific fetishes, appreciation for beauty/art). Once you know *exactly* who you're talking to, every decision becomes easier. Your content will resonate more deeply, your captions will hit harder, and your engagement will feel more authentic (within the persona). Don't be afraid to be niche. A smaller, highly engaged audience that feels like you *get* them is far more valuable than a large, indifferent one. They're more likely to subscribe long-term, buy PPV, and tip. Saturation only matters if you're trying to be generic. Find your specific corner of the market, own it, and cater relentlessly to that

group. They will find you, and they will pay for the tailored experience you provide.

Chapter 9: Selling the Fantasy - Roleplaying & Immersion

This is absolutely critical. You are not just selling images; you are selling a fantasy, an experience. Your AI persona needs to feel *real* within the context you've created. This means committing to the role. Every caption, every comment reply, every DM interaction should be *in character*. Maintain the illusion. Don't break character and talk about your AI generation process unless that's explicitly part of your persona (e.g., a "self-aware AI"). The language you use, the scenarios you create, the way you react – it all needs to align with the persona you've defined. This requires acting skills, essentially. You need to think, "What would [AI Persona Name] say or do in this situation?" This is especially true in DMs (which we'll cover more next). The more effectively you sell the fantasy and maintain immersion, the more invested your subscribers become. They start to feel a genuine connection (parasocial, yes, but powerful nonetheless) to the character. This deepens loyalty and significantly increases their willingness to spend money on PPV or tips, as they feel like they're interacting with and supporting the persona herself. Never underestimate the power of consistent, convincing roleplay. It's the glue that holds the entire AI persona experience together and makes it truly compelling.

Chapter 10: The Art of Engagement - Beyond Just Posting

Posting great content is only half the battle. You *must* engage with your audience. This means responding to comments (in character!), acknowledging likes, and, crucially, managing your Direct Messages (DMs). Engagement makes subscribers feel seen and valued. It transforms them from passive consumers into active participants in your persona's world. Respond to comments thoughtfully, again, staying true to your AI's personality. Ask questions in your captions to encourage comments. Run polls related to your persona or future content ideas. Make your feed feel like a community, not just a broadcast channel. DMs are where the real connection (and often, significant income) happens. Respond promptly (within reason), maintain the persona meticulously, and learn to guide conversations towards potential sales (PPV, custom requests, tipping) without being overly pushy. Good engagement builds relationships, fosters loyalty, and provides invaluable feedback on what your audience wants. It shows you're present and invested in them, which makes them more invested in you. Neglecting engagement is like setting up a beautiful shop and then ignoring the customers who walk in. It's a massive missed opportunity. Allocate specific time each day just for engagement –

it's that important.

Chapter 11: Mastering the DM - Chatting for Connection & Conversion

Direct Messages are arguably the most potent tool in your arsenal, especially on platforms like OnlyFans. This is where the one-on-one interaction happens, where the fantasy feels most real, and where a significant portion of your income can be generated through PPV messages and tips. Mastering DMs requires a delicate balance. You need to be engaging, maintain the persona flawlessly, build rapport, and subtly guide the conversation towards monetization opportunities. Respond in a timely manner, use the persona's voice consistently, and show genuine interest (within the character's framework) in the subscriber. Learn to recognize buying signals. If a user is asking for specific types of content or expressing particular fantasies, that's an opening to offer a custom PPV set. Use locked messages strategically – offer a tantalizing preview or a flirty message that requires a tip to unlock the full image or video. However, don't just sell. Provide value in the chat itself. Flirt, roleplay, make the subscriber feel special. This builds the connection that motivates them to spend. Be prepared for all kinds of messages; develop strategies (still in character) for handling demanding users, low-bidders, or those just looking for free chat. Consider using mass messages, but personalize them slightly if possible. Effective DM strategy is an art form that combines roleplaying, sales psychology, and customer service. Get it right, and your DMs will become a major profit center.

Chapter 12: Monetization Models - Subscriptions, PPV, Tips & Beyond

Let's talk money. How are you actually going to earn from this? Relying solely on the subscription fee is often leaving money on the table. A multi-pronged monetization strategy is usually best. Your subscription fee gets people in the door; it should be priced based on the perceived value of your regular feed content and persona. Then, you have Pay-Per-View (PPV) messages. This is where you sell your most exclusive or explicit content directly in DMs. Price these based on quality, exclusivity, and what your target audience can bear. Tipping is another key stream – encouraging tips for great service, fulfilling requests, or just as appreciation. Make it easy and appealing for users to tip. Custom requests can be highly lucrative but also time-consuming. Set clear boundaries and pricing for

customs – know what you will and won't create, and charge accordingly for the personalized effort. You might also consider tiered subscriptions (if the platform supports it) offering different levels of access or interaction. Think about bundling content – offer discounts for buying multiple PPV sets. Remember your previous interest in crypto invoicing? While platforms like OF primarily use traditional payments, if you build a strong enough brand, you could potentially offer exclusive content or services off-platform via your own site where you *could* integrate crypto payments for truly dedicated fans seeking anonymity or alternative payment methods, but be very careful about violating platform TOS by diverting users. Diversify your income streams within the platform first; master subscriptions, PPV, and tipping before exploring more complex options.

Chapter 13: The Tech Stack – Tools Beyond Image Generation

While the AI image generator is central, other tools can streamline your workflow and enhance your offerings. Consider using a scheduling tool (if allowed by the platform or using third-party social media schedulers for promotion) to plan and automate your posts, ensuring consistency even when you're busy. As mentioned, basic photo editing software (Photoshop, GIMP, Photopea) is essential for touch-ups and maintaining quality control – fixing those AI artifacts is crucial for realism. For creating short video clips from your images, look into AI animation tools like RunwayML, Pika Labs, or Kaiber. These can add a dynamic element to your feed or PPV offerings. Secure and reliable internet is a must, obviously. For organization, use cloud storage (like Google Drive or Dropbox) to keep your generated images, prompts, and persona notes organized and backed up. Consider password managers for security. If you're handling finances seriously (which you should be), basic accounting software or spreadsheets are needed to track income and expenses. For DMs, especially if volume gets high, some creators explore using CRM-like principles (even in a simple spreadsheet) to keep track of key subscribers, their preferences, and past purchases to personalize interactions. Think about your workflow from idea to posted content to DM interaction – where can technology make you more efficient or improve the final product?

Chapter 14: Legal & Ethical Waters – Navigating with Care

This is a big one, and ignoring it can sink you. First, platform Terms of Service (TOS). Read them, understand them, especially the sections on AI-generated content, adult content, and prohibited activities. These can change, so stay updated. Breaking TOS is the quickest way to get banned and lose everything. Second, copyright. While the legal status of AI-generated image copyright is still

evolving globally, be cautious. Don't use prompts that explicitly try to replicate copyrighted characters or real celebrities (deep fakes without consent are a huge ethical and often legal minefield). Focus on creating original characters. Third, ethics. Be transparent (at least in your bio or pinned post) that the persona is AI-generated. While you sell the fantasy, outright deception can lead to backlash or platform issues. Avoid generating illegal or harmful content types. Consider the ethical implications of the fantasies you're catering to. While adult content creation is legal in many places, ensure your specific content themes don't cross lines into promoting harm. If you're using tools like Stable Diffusion, be aware of the datasets they were trained on and potential biases. Operating ethically and within legal boundaries protects your business long-term and builds a more sustainable brand. Don't cut corners here.

Chapter 15: Analytics - Listening to the Data

Your platform's analytics dashboard is not just a vanity board; it's a crucial feedback mechanism. Pay close attention to which posts get the most likes, comments, and shares (if applicable). Which PPV messages have the highest purchase rate? What time of day does your content get the most engagement? How many profile views are converting into subscriptions? This data tells you what's resonating with your audience and what's falling flat. Use these insights to refine your content strategy, persona interactions, and posting schedule. If posts featuring a certain outfit or scenario consistently perform well, create more content like that. If your subscription conversion rate is low, maybe your preview content isn't compelling enough, or your price point is off. Track your earnings per subscriber and your overall income trends. Are PPV sales increasing? Is tip income growing? Data removes the guesswork. Regularly analyze your performance (weekly or monthly) and make adjustments based on what the numbers are telling you. Don't just rely on gut feeling; let the data guide your decisions for optimizing content and maximizing revenue. Treat it like any other business analyzing its sales figures and customer behavior.

Chapter 16: Standing Out - Differentiation in a Crowded Space

Yes, there are many AI personas out there. How do you make yours stand out? It comes back to having a unique, well-defined persona, consistently high-quality and distinctive content, and excellent engagement. Find a unique angle. Is your AI persona tied to a specific niche interest (e.g., sci-fi, fantasy, vintage)? Does she have a very specific personality type that's underserved? Is your visual style unique (e.g., using a specific LORA or post-processing technique)? Maybe your

differentiation is in the *level* of interaction you offer in DMs, creating a truly premium chat experience. Look at what others are doing, not to copy, but to identify gaps and opportunities. What are they not doing well? Can you offer higher quality visuals? A more compelling character? More engaging storylines? Better customer service in DMs? Don't try to be a slightly better version of someone else; aim to be *different*. Your unique selling proposition could be the persona's backstory, a specific visual aesthetic, the type of fantasies you cater to, or the way you build community. Consistently deliver on that unique promise, and you'll attract and retain subscribers who resonate with your specific brand, regardless of how many other AI accounts exist.

Chapter 17: Promotion & Marketing - Beyond the Platform Walls

While the platform's internal traffic is important, especially initially, relying solely on it can limit your growth. Think about external promotion, carefully. Social media platforms like Twitter (X), Reddit (in relevant subreddits, following their rules strictly), Instagram/Threads (carefully, avoiding shadowbans), and even TikTok can be used to tease your content and drive traffic to your main platform page. Create SFW (or cleverly suggestive) preview content specifically for these platforms. Build a brand presence. Use watermarks (subtly) on your promotional images. Engage in relevant online communities (again, following rules and providing value, not just spamming links). Building an email list (perhaps offering a free SFW gallery for sign-ups) can be a powerful way to own your audience connection, independent of any single platform's algorithm or policies. Consider collaborations with other creators (AI or human) if it makes sense for your brand. The key is to drive targeted traffic – people who are likely to be interested in your specific niche and willing to subscribe. Be strategic, be patient, and always respect the rules of the platforms you're promoting on. External marketing expands your reach beyond the confines of your primary content platform.

Chapter 18: Handling Challenges - Trolls, Tech Issues & Content Blocks

It won't always be smooth sailing. You'll encounter challenges. Be prepared. Technical issues: AI generators can be down, platforms can have glitches. Have backup plans, maybe know how to use more than one tool. Content blocks: Sometimes the creative well runs dry. Revisit your persona notes, look at your best-performing content for inspiration, browse unrelated art for ideas, or even take a short break to recharge. Trolls and difficult users: Develop a thick skin. Not everyone will like your content or persona. Learn to ignore, block, or restrict users

who are abusive or violate boundaries. Don't feed the trolls. Have clear rules for your DMs and enforce them. Chargebacks: They happen. Keep good records of interactions and content delivery to dispute them if necessary. Platform policy changes: Stay informed. Be prepared to adapt if a platform suddenly changes its stance on AI content. Having a presence on multiple platforms (even just promotional ones) or an email list can mitigate this risk. The key is resilience and problem-solving. Anticipate potential issues and have contingency plans. Don't let setbacks derail you; view them as part of the entrepreneurial journey.

Chapter 19: Scaling & Long-Term Vision - What's Next?

Once you've established a consistent income stream and workflow, you might think about scaling. What does that look like? It could mean refining your process to become more efficient, allowing you to produce higher quality content or engage more deeply. It might involve exploring new content formats, like longer animated sequences or interactive elements (if platforms allow). Could you potentially train a custom AI model (using advanced Stable Diffusion techniques) for even greater character consistency and uniqueness? Some creators eventually hire help, like a virtual assistant to manage scheduling, filter DMs (initially), or handle basic editing tasks – but be *extremely* careful with account access and maintaining persona consistency. What's your long-term vision? Is this a side project, or do you aim to build a significant brand? Could the AI persona potentially branch out into other areas (e.g., SFW social media, merchandise – though be cautious with platform rules)? Thinking about the long game helps you make strategic decisions today. Where do you want this to be in one year? Three years? Having a vision beyond just the next post keeps you motivated and focused on sustainable growth.

Chapter 21: The Secret Sauce - Underground Tactics & Growth Hacks

Alright, let's talk about the stuff that isn't always obvious – the 'secret sauce' tactics that can give you a real edge if you're smart about it. First up, the strategy you mentioned: the \$0 Subscription Fee Model. This sounds counterintuitive, right? Give away access for free? But here's the psychology: it massively lowers the barrier to entry. Anyone curious can follow you without commitment. This floods your funnel with potential leads. Your job then shifts entirely to converting these free followers into paying customers via DMs. You need *killer* engagement skills (Chapter 10 & 11 on steroids) and a steady stream of enticing PPV content offers. The free feed acts as a high-quality trailer, showcasing your persona and content

quality, making people *want* to slide into the DMs. You focus 100% on identifying the serious buyers – the ones willing to tip generously for attention and buy exclusive PPV content. It filters out low-effort subscribers and lets you concentrate on high-value interactions. It's more work in the DMs, no doubt, but the potential earnings from tips and PPV from truly engaged fans can vastly exceed standard subscription revenue if your persona and chat game are top-tier. It's a high-touch, high-conversion model, not for the lazy, but incredibly lucrative if done right.

Beyond that, consider Hyper-Niching. We talked about niching down, but going deeper. Don't just target "goth," target "cyberpunk goth who quotes obscure literature." Don't just target "fitness," target "powerlifting enthusiast AI who gives motivational workout tips." The more specific and unique your niche, the less competition you have and the more fanatical your small audience becomes. They feel like you created this *just for them*. Another tactic, tread carefully here due to TOS risks, is the Strategic "Leak". This doesn't mean losing control, but a *controlled* release of maybe one or two slightly less explicit but still high-quality images onto specific, relevant forums or image boards (ones that *allow* such content, check their rules religiously) with a subtle watermark or hint leading back to your main profile. It acts as high-quality bait, driving targeted traffic. Risky, can backfire if done wrong or violates TOS, but effective for some. Building Adjacent SFW Communities (like a Discord or Telegram focused on the AI's 'interests' or just a fan hangout) can also work, *but* be extremely careful about platform rules regarding driving traffic off-site, especially for monetization. Use it to build community and deeper connection, funneling interest back to the main platform profile where the transactions happen. Finally, think about Advanced Persona Dynamics – give your AI flaws, evolving opinions, storylines that react subtly to major fan interactions or even current events (within reason). Make her feel less static, more alive. These deeper layers of engagement and unconventional strategies separate the pros from the amateurs.

Chapter 22: Final Thoughts - Stay Curious, Stay Adaptable

The world of AI is moving incredibly fast. The tools, techniques, and even the platforms themselves are constantly evolving. What works today might be outdated in six months. The final, and perhaps most enduring piece of advice, is to stay curious and adaptable. Keep learning about new AI models, prompting techniques, and editing tools. Pay attention to trends in the online adult content space. Listen to your audience – they will often tell you what they want next. Be willing to experiment and pivot your strategy when necessary. The creators who

succeed long-term in this space are the ones who embrace change and continuously refine their craft and their business acumen. Don't get complacent. Keep pushing the boundaries of quality, creativity, and engagement. Treat your AI persona operation with the seriousness and dedication it deserves, stay informed, and be ready to adapt to whatever comes next. Good luck.

Chapter 23: Platforms Ranked From Best To Worst

Instagram Reels

Snapchat Spotlights

Facebook Reels (A gold mine if done correctly, got my first big tipper here)

Telegram Groups (If you can't find one, make one)

X/Twitter

Bluesky (Has a surprising amount of older users)

Reddit

TikTok

Discord (Can get some traction from certain communities but I wouldn't bank on it)

Whatsapp Groups (Literal Hit or Miss)

Youtube Shorts (Alot of kids, easily bannable, but can get some side income)

Pinterest (??? Don't fucking use this, its only women, they rich af there tho so its good for affiliate marketing)

Threads (A worst X/Twitter don't waste your time)

Vimeo (??? Why?)

Honorable Mentions

Red Note (If you model is asian or asian passing, you can print here)

Pornhub & other pornsites/hentai sites (Your target audience is already here but you need to work three times as hard to stand out, honestly you might be better

off posting regular porn, but if you are up for the challenge the rpms on pornhub premium is like 40\$ per 1000 views)

My recommendation to create your model initially is Sea Art AI as in my opinion not only is it significantly cheaper but it's just as good, however it does lose on a bit in video creation.

Here are some models from Sea Art you can/should copy

Wrapping It Up - Good Luck!

So yeah, that's basically the lowdown! It's a lot, for sure, but hopefully breaking it down like this helps make sense of it all. It's a marathon, not a sprint, y'know? Keep experimenting, keep learning, and don't forget to keep that separation between you and the AI persona – super important for staying sane! Alright, awesome that you're seeing this! So, now that you've got your model all set up, just give me a shout if you have any questions or want to tweak anything – seriously, I'm here to help however I can. And once everything is good to go, I've got a little something for you as a thank you. Cheers again for everything, and best of luck! You got this!
